

DSX Access Systems, Inc.

HSPD-12 / FIPS

DSX Access Systems is in alignment with Homeland Security Presidential Directive-12 (**HSPD-12**) - "*Policy for a Common Identification Standard for Federal Employees and Contractors*". DSX works in conjunction with CodeBench™ and others for PIV compliance. The WinDSX SQL application is FIPS 201 compliant and fully compatible with PIV II / TWIC readers and cards. With its ability to work with over 250 reader and card formats, DSX is and always has been compatible to most legacy CAC and TWIC cards. Due to the wide variety of cards and readers available and the dynamic nature of this developing technology DSX recommends a test of the readers and cards selected prior to commissioning the system.
