CMC-2 CONEXT™ MOBILE ACCESS CREDENTIAL

Conekt comprises Farpointe Data’s mobile credential solution, utilizing Bluetooth Low Energy (BLE) to enable communication between a smart phone and Conekt mobile-ready readers. Stored and activated within the Conekt Mobile Wallet App, Conekt mobile credentials work in much the same manner as physical credentials, supporting 26-Bit Wiegand format, as well as custom Wiegand, ABA Track II magnetic stripe and serial data formats. They employ value-add features, such as MAXSecure™, and advanced data protection, such as AES encryption. Conekt access credentials, both traditional and mobile, can be ordered programmed to various formats in exact number sequence required. Just as with traditional physical credentials, Conekt mobile credentials can also be private labeled with a company name, logo, phone number, web address, or other information.
